

Lagos State Fire Safety Levy Clearance (LagosFSLC)

Technical Developer Presentation & Layman Explanation Guide

Prepared for Meeting with Lagos State Fire Safety Leadership & Stakeholders

BEGINNER-FRIENDLY ARCHITECTURE & OPERATIONAL STUDY

Executive Summary for Technical Presenter:

This guide breaks down the complex software architecture of the LagosFSLC application into plain, everyday language. Use this guide to present confidently to non-technical stakeholders, board members, and state officials.

1. What is the LagosFSLC Application? (The Big Picture)

Think of the **LagosFSLC Application** as a **Digital Bridge** connecting all business owners in Lagos State directly with the Lagos State Fire Service. Before this platform, registering a business for fire clearance, calculating levies, making payments, scheduling inspections, and receiving clearance certificates was done through manual paperwork and physical visits.

With this portal, the entire journey—from registration to payment and final certification—happens online seamlessly, securely, and transparently.

Everyday Analogy: It works just like booking a flight online. You enter your flight details (Business Info), select your seat and add luggage (Branch Declaration), pay securely through the airline's payment gateway (Lagos RevPay Integration), get your digital boarding pass (Visitation Schedule), and present it at the gate (Field Inspection & Certificate).

2. Step-by-Step Operational Workflow (Layman's Guide)

1 Account Creation & Business Identity Check

What happens: A business owner visits the portal and registers using their company details, tax identification (Payer ID), CAC registration number, or NIN.

Why it matters: The system sends a 6-digit Security Code (OTP) to their phone/email to verify that the person creating the account is real and authorized.

"How to explain in the meeting: We ensure no fake businesses can register. The system automatically cross-checks business records against Lagos State tax databases and confirms ownership via phone OTP."

2 Branch & Building Declaration

What happens: The business owner lists all their physical offices, shops, or factories across Lagos State (e.g., Ikeja head office, Lekki branch, Ikorodu warehouse), specifying building type, staff size, and floor space.

Why it matters: Fire safety risk depends on building size and location. The application automatically calculates the appropriate statutory levy using these exact figures.

"How to explain in the meeting: Business owners simply declare where their shops and offices are. Our engine automatically calculates the exact fee based on state approved rates—no manual errors, no guesswork."

3 Automated State Invoice & Government Payment

What happens: Once declarations are complete, the system generates an official Lagos State electronic invoice connected directly to the Lagos State Revenue Service (RevPay API).

Why it matters: Payments go directly into official state treasury channels. The business receives instant digital receipts, eliminating cash handling and revenue leakage.

"How to explain in the meeting: Payment is 100% transparent. The platform connects directly to Lagos State RevPay. As soon as a business pays, the state bank system notifies our portal immediately."

4 Inspection Scheduling & Field Officer Audits

What happens: After payment, the business picks a convenient calendar date for fire officers to visit. Fire officers receive the appointment on their Backoffice dashboard and conduct physical safety checks on-site.

Why it matters: Officers can record extinguisher counts and safety equipment directly into their mobile devices/laptops while on site.

"How to explain in the meeting: No more missed appointments. Businesses select a date, and fire officers go out with digital audit forms to inspect extinguishers, exits, and safety compliance."

5 Approval & Certificate Issuance

What happens: Once the field officer approves the inspection findings in the Backoffice, the supervisor clicks 'Approve', and the business can instantly view and download their official Fire Safety Clearance Certificate.

Why it matters: Eliminates certificate printing backlogs and allows instant verification by enforcement officers.

"How to explain in the meeting: As soon as inspections are approved, the clearance certificate is generated digitally. Businesses can download and print it right from their dashboard."

3. Portal Architecture Overview

Portal Name	Target Audience	Key Functions
Business Portal (<i>business.firesafetylevyclearance.org.ng</i>)	Business Owners, Facility Managers, Tax Representatives	• Account creation & verification • Branch asset declarations • Online levy payment • Inspection date picking • Downloading clearance certificates
Backoffice Portal (<i>backoffice.firesafetylevyclearance.org.ng</i>)	Fire Officers, Field Inspectors, Admin Managers, State Leadership	• User role management & security • Field QA inspection forms • Payment reconciliation • Visitation approvals & rejections • Statewide compliance reporting

4. Quick Presentation Cheat Sheet for the Technical Dev

Key Points to Emphasize to Leadership:

1. **Zero Revenue Leakage:** All payments connect directly to Lagos State RevPay payment gateways with cryptographic security.
2. **Full Operational Visibility:** Management can see real-time statistics on registered businesses, total revenue collected, pending visitations, and issued certificates per LGA.
3. **Speed & Efficiency:** Reduces clearance processing time from weeks down to a simple, automated online workflow.
4. **Complete Audit Trail:** Every action taken by any staff or business owner is logged with timestamps, staff ID, and task details for total accountability.
